

## CALIBRATING YOUR DEVICE

In order to complete a Vizual Edge Evaluation or Training session, you must first calibrate your device screen. Calibrating your device screen is necessary to ensure that the Edge Trainer tests are properly adjusted based on screen size.

1. After logging into your account, select **TRAINING** from the left-hand menu.

2. Next to your three training options, select **CALIBRATE DEVICE**

3. A pop up will appear with your devices listed. Select **CREATE NEW PROFILE**

4. Enter your device name and adjust the 1-inch scale based on your screen size.

The screenshot shows a web form titled "CALIBRATE YOUR DEVICE" with a close button (X) in the top right corner. The form contains the following elements: a text input field labeled "ENTER DEVICE NAME" containing the text "Dell Laptop"; a checkbox labeled "ENABLE TOUCH CONTROLS" which is currently unchecked; a section titled "ADJUST RENDER SCALE" with the instruction "Please adjust the line below until it measures one inch long on your device's display surface." Below this instruction is a visual scale consisting of a horizontal line with vertical end caps, labeled "1 inch" in the center, and two small square buttons labeled "-" and "+" on either side. At the bottom of the form, there is a link that says "Download PDF to print with a one inch ruler and instructions." and a large blue button labeled "SUBMIT".

NOTE: You can select [Download PDF](#) to print out a one-inch ruler and instructions if you do not have a ruler easily accessible to measure.

The screenshot shows the same "CALIBRATE YOUR DEVICE" form, but with the text "iPad" entered in the "ENTER DEVICE NAME" field. The "ENABLE TOUCH CONTROLS" checkbox is now checked. All other elements, including the "ADJUST RENDER SCALE" section with the 1-inch scale and the "SUBMIT" button, remain the same as in the previous screenshot.

NOTE: If you have a touch screen laptop or tablet with no keyboard, please be sure to mark **ENABLE TOUCH CONTROLS**

5. After you have correctly measured one inch, click [SUBMIT](#) to save your device profile.
