

GIVE YOURSELF THE COMPETITIVE EDGE

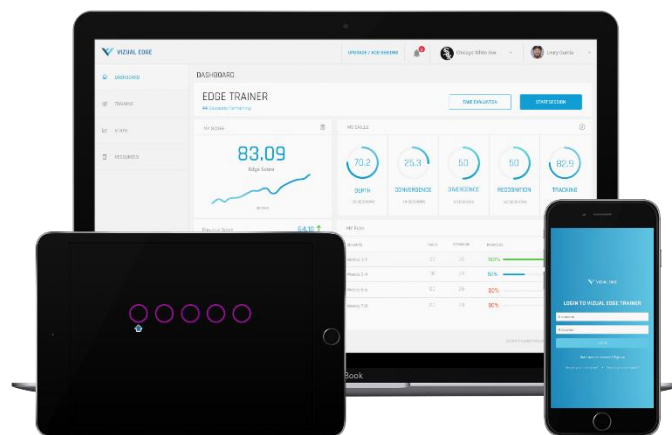

WITH VISION TRAINING FROM **THE EDGE TRAINER**

The Edge Trainer from Vizual Edge is a simple **web-based training tool** designed to improve the speed, coordination & efficiency of your eye movements. Training with the Edge Trainer has shown to help football players improve:

- **Quicker decision-making & reaction speed**
- **Coverage & play recognition**
- **Positional & spatial awareness**
- **Passing accuracy (near & far)**
- **Judging the trajectory of the ball & more!**

With over 15 years of experience working with Professional, NCAA, & youth athletes, we've accumulated more than 40,000 evaluations - which allows us to provide invaluable positional player comparisons, along with assessment reports & customized training plans. These detailed reports are designed to help you evaluate, analyze & train your core visual skills.

Training exercises cannot be completed on cell phones

THE SETUP

THE SYSTEM

EVALUATE

Evaluate athlete's proficiency in the core six visual skills.

ANALYZE

Analyze the athlete's visual strengths & weaknesses & compare to athletes who play the same positions.

TRAIN

Train core visual skills for optimal football performance.

THE PLAN

UNLIMITED TRAINING

Evaluate & train during & between seasons

BENCHMARKING

Comprehensive football benchmarking

REPORTS

In-depth review & custom player reporting

SUPPORT

Online & phone support throughout the year as needed.

GLASSES

One set of premium Vizual Edge 3D glasses per player.

WHEN TRAINING YOUR GAME LOOK BEYOND 20/20 VISION

In order to accurately create a comprehensive picture of what's happening around us, we depend upon six core visual skills. Each visual skill can impact different aspects of a player's game. For optimal football performance, players should aim to maximize their proficiency in each of the skills shown below.

CONVERGENCE

Convergence is the ability to focus on objects within close proximity & judge their movement & impact. Convergence may affect a player in the following ways:

- Ability to locate a quick moving ball as it approaches to secure a catch
- Target an offensive player as a player closes in on a tackle

DIVERGENCE

Divergence is the ability to locate objects in the distance, impacting an athlete's ability to anticipate & react. Divergence score may affect a player in the following ways:

- Ability to locate defenders quickly & track their movements in coverage or locate offensive players while reading the quarterback's eyes
- Ability to judge the speed & trajectory of the ball as it leaves the quarterback's hand

DEPTH PERCEPTION

Depth perception uses both eyes to locate objects in space to judge their distance, speed, & direction. Depth perception score may affect a player in the following ways:

- Quarterback's ability to feel the pocket & locate defenders closing in on the blind side
- Overall ability to operate in highly congested spaces

ALIGNMENT

Proper alignment creates no difference between the perceived location & actual location of an object. Alignment score may affect a player in the following ways:

- Accurately hitting intended target (passing & tackles)
- Crispness & decisiveness of movements

RECOGNITION

Recognition is the ability to observe, process & recall a series of visual targets, & respond properly. Recognition score may affect a player in the following ways:

- Recognize offensive & defensive players tendencies
- Reading developing run or passing plays
- Formational & zonal identification on both sides of the ball

TRACKING & PURSUITS

Saccadic & smooth pursuits tracking allows you to process & follow an object while always monitoring all aspects of the game. Tracking score may affect a player in the following ways:

- Ability to track the ball or opponent
- Overall anticipation & reaction speeds
